ARBORJET
Revolutionary Plant Health Solutions

PEST CONTROL

ARBORPLUG ADVANTAGE

Despite the phase out of imidacloprid, Health Canada has stated that its use in Tree Injection is acceptable. The Arborjet process seals the product in the tree, ensuring minimal active chemical be released into the ground and waterways.

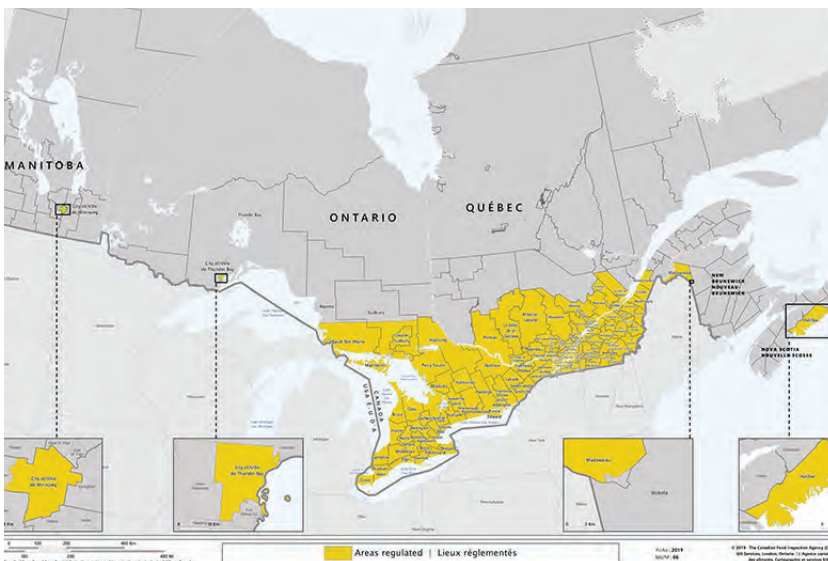

- The self sealing septum prevents product leakage
- Tight seal in the tree
- Accurate pressure sustained throughout the injection process.
- "Closed" injection sites limits wounding, speeds healing, inhibits decay or infection from entering site

"The phaseout [of imidacloprid] would apply to trees, greenhouse uses of the pesticide, commercial seed treatment, outdoor agricultural uses and turf. It would not apply to use of the pesticide in and around homes or buildings, injections directly into tree trunks..."

- The Globe and Mail, Nov 2016
